

Acoustic Systems Partial Project Reference List

Acoustic Systems has been designing and manufacturing products for hearing conservation and audiology since 1971. Since that time we have grown our Austin, Texas manufacturing plant to include a NVLAP accredited test laboratory for ongoing product development and improvement, and to service the needs of our customers requiring the best acoustic isolation systems available.

While the hearing conservation and audiology market represents our primary focus, our design expertise and manufacturing capability allows us to service the needs of our customers who require products for music practice, high-end recording and broadcast studios, industrial testing, academic and medical research, and large anechoic and hemi-anechoic research chambers.

Below is a partial list of larger scope Audiometric projects from 2000 to 2003. The projects were designed by Acoustic Systems' in cooperation with our network of factory trained and authorized sales representatives. The booths were manufactured by Acoustic Systems and installed by our many nationally located certified installers.

Veterans Administration Medical Center Installations:
